# Chapter 1

## Background

I love coherent states

## **1.1 Utility and scope of semi-classical methods**

get that adiabatic shit outta here lil bro

### **1.1.1 Bosonic system 1: Bose-Hubbard model**

he bossin

### **1.1.2 Bosonic system 2: Displaced harmonic trap**

me when i quantise the modes

### **1.1.3 Fermionic system: molecular electronic structure**

ground state would be nice aha

## **1.2 Coherent states: a hundred year-long history**

Here we write that sweet history of coherent states

### **1.2.1 Schrodinger: the harmonic oscillator**

Truly coherent, mm

### **1.2.2 Glauber: field coherent states**

we exponentiating in this mofo

### **1.2.3 Zhang, Feng, Gilmore: coupled coherent states**

me when i group

## **1.3 Mathematical approach to CS-based methods**

surprisingly easy to generalise this shiss

### **1.3.1 Topology of the CS parameter space**

de aguiar is my man

### **1.3.2 Fully variational equations of motion**

He do be overlappin doe

# Chapter 2

## Current work

i work hard yes

## **2.1 Bosonic $SU(M)$ coherent states**

### **2.1.1 Construction**

transitioning into a better person rn

### **2.1.2 Results**

## 2.2 Fermionic $SU(M)$ coherent states

### 2.2.1 Construction of the unnormalised state

### 2.2.2 Overlap and normalisation

### 2.2.3 Fermionic operator sequence matrix element

### 2.2.4 Connection to molecular electronic structure

quote the two body and one body integrals matey

### 2.2.5 How to get that sweet sweet ground state

# Chapter 3

## Outlook

we want that nobel ngl

# Appendix A

## Auxiliary theorems

This appendix presents mathematical results which were used to derive the mathematical properties of bosonic and fermionic coherent states, but which were chosen to be omitted from the main body of text due to their abstract mathematical nature.

The author does not claim originality of these theorems or their proofs, but chooses to include them, as he was unable to find them in existing literature. The work presented in this appendix is the author's, except for mathematical identities which are stated explicitly.

### A.1 counting minors
